

Core Operation Program for a Large Logistics Company

Client Background and Business Requirements :

The client is mainly engaged in domestic and international express delivery service, which is the second-largest domestic courier enterprise. Since its establishment, it has been committed to improving service quality and to satisfying market demands. It has set up a wide range of business functions covering research and development, logistics, pickup & delivery, and also has established a nationwide network (including Hong Kong, Macau, and Taiwan). At the same time, it has been also actively expanding its international delivery services.

- Core operation system would be the largest software outsourcing project for the client.
- It shall build a business-support system with high performance, stability and scalability.

Beyondsoft Solution :

- Project execution manager, system architect, DBA, interface switching expert and tuning specialists are nominated as the five core members.
- Set up development plan.
- Assisted client in the selection of hardware
- Established a development framework according to the IT planning.

Client Benefits:

the successful implementation of C2 project has laid a solid foundation for the subsequent projects for the client, and it also has helped accumulated management experience and strengthened the management team.
